

Tubes No abnormal thickening or dilatation noted.

Minimal fluid is seen in the cul-de-sac.

Urinary bladder : Normal lumen and walls.

IMPRESSION :

1. Bulky uterus showing an encapsulated solid lesion in the uterine cavity measuring about 2.3x1cm in diameter - submucous fibroid or a polyp.
2. Another degenerating solid lesion in the uterine wall, measuring about 1.8x1.7cms in diameter - intramural fibroid.
3. 8 cystic areas in the right ovary varying in size from 9 to 4mm and similar 8 cystic areas in the left ovary, varying in size from 11 to 7mm - follicles or cystic ovaries.
4. Minimal fluid in the cul-de-sac - due to ovulation or mild inflammation.

Suggest clinical correlation.

GYNAECOLOGICAL SONOGRAPHY

URINARY BLADDER : Is overdistended. No mucosal lesion, calculus or dilated terminal ureter was detected.

UTERUS : Is normal in size and anteverted.

Measures : 84 mm (length) x 38 mm (antero-posterior) x 67 mm (transverse).

Endometrium is hyperechoic and upto 12 mm thick.

Myometrium shows a coarse non-homogenous echotexture; presently there is no obvious fibroid detected on TAS.

RIGHT OVARY : Is slightly prolapsed into the right side of the pouch of Douglas. The right ovary is normal in size and shows follicles upto 11 mm.

LEFT OVARY : Is slightly prolapsed into the right side of the pouch of Douglas. The left ovary is normal in size and shows follicles upto 13 mm.

No adnexal mass or cyst seen on either side.

There is no free fluid in the pelvis or upper abdomen.

Liver, portal vein, gall bladder, pancreas, upper para aortic areas and spleen appear normal.

BOTH KIDNEYS : are normal in position, size, shape and echopattern. No significant pelvi caliceal dilatation, calculus or focal lesion was detected.

IMPRESSION

- NORMAL SIZE UTERUS SHOWING 12 MM THICK HYPERECHOIC ENDOMETRIUM.
- NO SIGNIFICANT FIBROID OR OVARIAN MASS/CYST SEEN AT PRESENT.
