DR. NAMBIAR'S ULTRASOUND SCAN CENTRE

KARUNA, CHITTOOR ROAD, KOCHI 16

Ph: 364623/352833

ULTRASOUND, ECHOCARDIOGRAPHY & WHOLE BODY COLOUR DOPPLER SCAN

PATIENT'S NAME : Mrs. THANKAMANI

July 19, 2000

Consultant : Dr. S. KRISHNAKUMAR

Many thanks for the referral.

### REPORT

#### Ultrasound study of the uterus and adnexa

Uterus : measures about 12.5x6.7cms in diameter. Uterus is bulky. Endometrial lining is compressed. Multiple irregular degenerating solid mass lesions are seen in the uterine walls, varying in size from 4.5 to 3cms (about 4nos). No mass lesion seen in the adnexa. Cervix is normal

Ovaries : Normal.

Tubes No abnormal thickening or dilatation noted.

No fluid is seen in the cul-de-sac.

Urinary bladder : Normal lumen and walls.

#### IMPRESSION :

Bulky uterus showing multiple irregular degenerating solid mass lesions in the uterine walls, varying in size from 4.5 to 3cms (about 4nos) - intramural fibroids.

Suggest clinical correlation.

Dr. DAMODARAN NAMBIAR, MD, DMRD.  
(Consultant Radiologist)

Consultant : Dr. S. KRISHNAKUMAR

Many thanks for the referral.

**REPORT**

**Ultrasound study of the gravid uterus**

A single live fetus seen in the uterine cavity showing normal movements and heart beats.

BPD of the fetus measures about 27mm, FL 14mm and HL 14mm all corresponding to a gestational age of 13 to 14 weeks.

No gross abnormality seen in the fetus (detectable by u.s.s)

Liquor amni - Normal in quantity.

**Placenta -**

In the posterior uterine wall extending from the fundus downwards and its lower margin is minimally extending into the upper part of the lower uterine segment (it may go up afterwards). Grade 0 maturity. No retroplacental clot, placental separation or abnormal degenerative changes are noted.

Umbilical cord : N.A.D. 3 vessels seen.

Uterine walls : An encapsulated degenerating solid mass seen in the uterine walls, in the body and lower segment, measuring about 12.6x9.4cms in diameter.

Cervix measures about 3.8cms length. No dilatation noted in the internal os.

**IMPRESSION :**

1. A single live fetus in the uterine cavity corresponding to gestational age of 13 to 14 weeks in transverse lie at present.
2. Normal biophysical profile.
3. An encapsulated degenerating solid mass in the uterine walls, in the body and lower segment, measuring about 12.6x9.4cms in diameter - fibroid.

Suggest clinical correlation and follow up ultrasound.

Dr. DAMODARAN NAMBIAR, MD, DMRD.  
(Consultant Radiologist)
